(Article 2.2.3.) 成長段階における感受性

- a) All age groups of fish, from juveniles upwards, appear to be susceptible to infection with KHV (Bretzinger *et al.*, 1999; Sano *et al.*, 2004) but, under experimental conditions, 2.5-6 g fish were more susceptible than 230 g fish (Perelberg *et al.*, 2003). Carp larvae are resistant to infection with KHV but the same carp were susceptible to infection on maturation. (Ito *et al.*, 2007)
